Odoo V.14

Module: Website

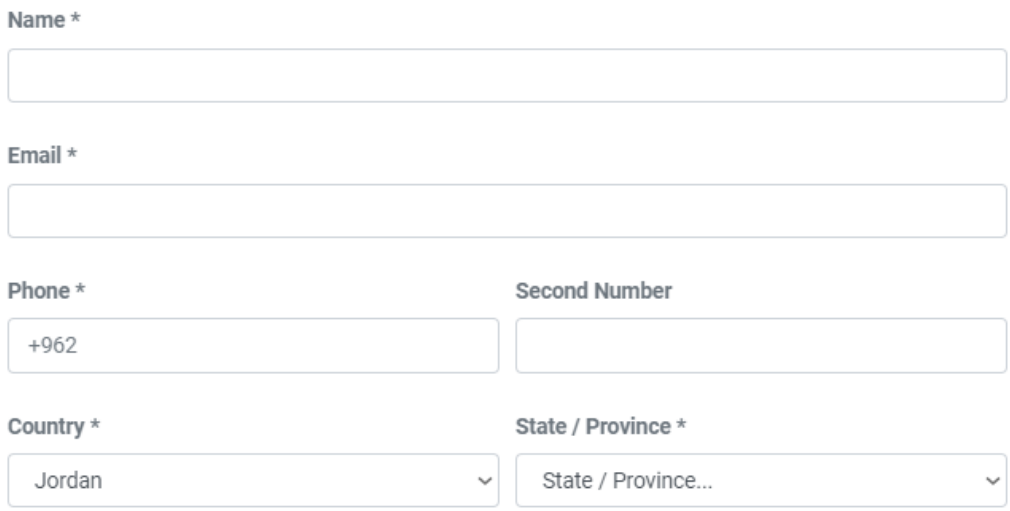
Ticket # 3129

Requirements:

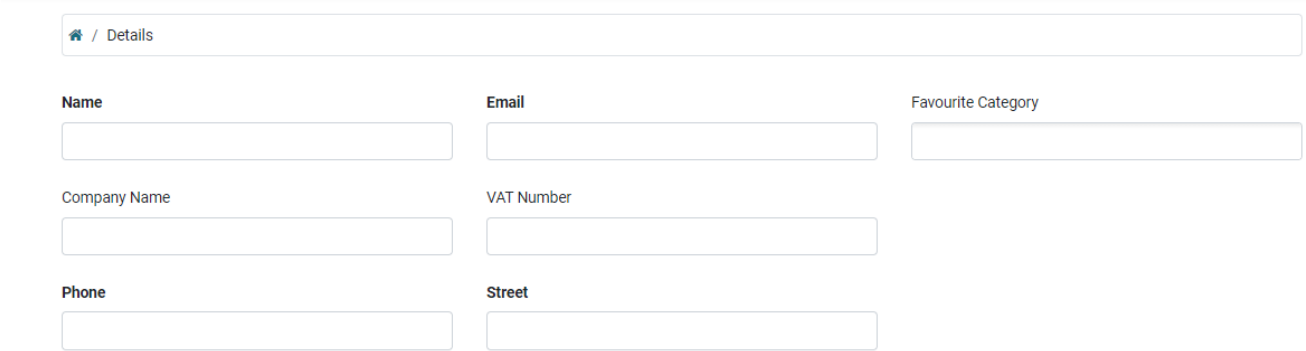
Hide The Field "Phone " in the address Screen and My Account / Details screen and display a new field linked to the mobile field in the back end

Current Standard views:

In the address screen

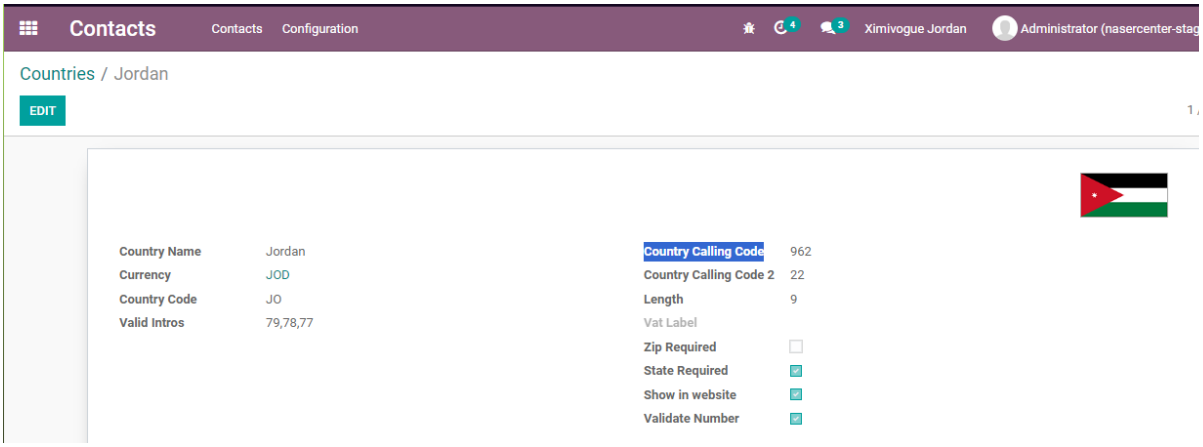


In My Account / Details



Design:

1. Hide the "Phone" field from both pages. "Keep in mind that the "Phone" field is a mandatory.
2. Add a new field with the name "Mobile".
3. The new field should be a mandatory field with the symbol * in the address screen.
4. The new field should be linked to the "Mobile" field in the back end.
5. The "Phone" field has a placeholder number. This number comes from the backend in contacts / Countries there is a field called Country Calling Code So the placeholder of the new field should get its value from the backend like the "Phone" field.



6. The order of the new field is the place of the "Phone" field.
7. The label of the mandatory fields in the My Account screen is bold so the new field should have a bold label also.

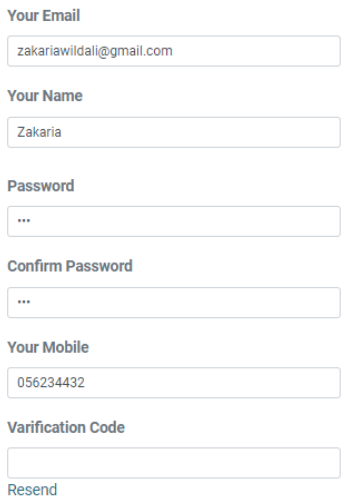
Ticket # 4184

Requirements:

Whenever the user resets his password and clicks on send verification code, a validation will be triggered to check whether the new number doesn't equal the old number to prevent the verification code from being sent.

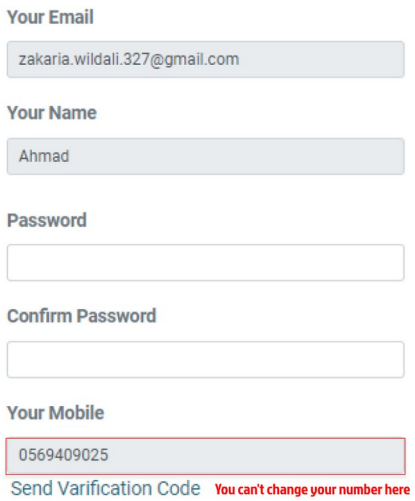
Current Standard view:



Design:

1. Make the necessary changes on the controller to check the mobile number before sending the verification code.

Suggested View:



Ticket # 3210

Requirements:

When the user logs in, or signs up to the website, the system will directly open his account page. Make the system open the Shop page instead of the Account page.

Current Standard view:

Signs in to My Account page.mp4

Design:

1. Keep standard Behavior of the logs in, and signs up as is.
2. The standard Behavior of the Sign up when clicking on "Sign up to follow your order" is to go to my account and display the user order so don’t change this behavior.
3. Just change the redirection from the My Account to the Shop page.

Suggested View:

Signs in to Shop page.mp4

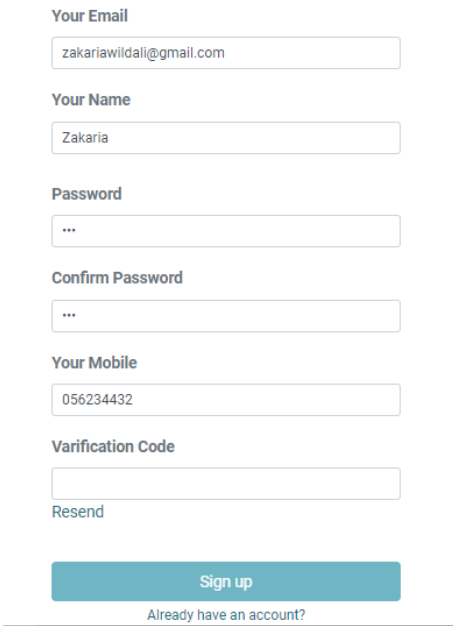
Ticket # 3737

Requirements:

When a user clicks on the "Send verification code" when creating an account, reset password form, or reset password request using a mobile number, or in the sign up to follow order page, a timer will appear counting down from 60 each step is a second to inform the user that the code will sent in this period

Current Standard view:

In create account page



Design:

1. Keep the standard Behavior as is.
2. just change the following:
    a. When the user clicks on Send verification code the timer will show before the "Resend" link.
    b. Same behavior when the user clicks on "Resend".
    c. Prevent the user from clicking on "Resend" if the timer value is not 0.

d. If the timer is 0 and the user clicks on "Resend" the timer will start over from 60 "Don't forget to apply the same condition in point 3".
e. These modifications will be added also to the sign up to follow order page, reset password form, reset password request using a mobile number.

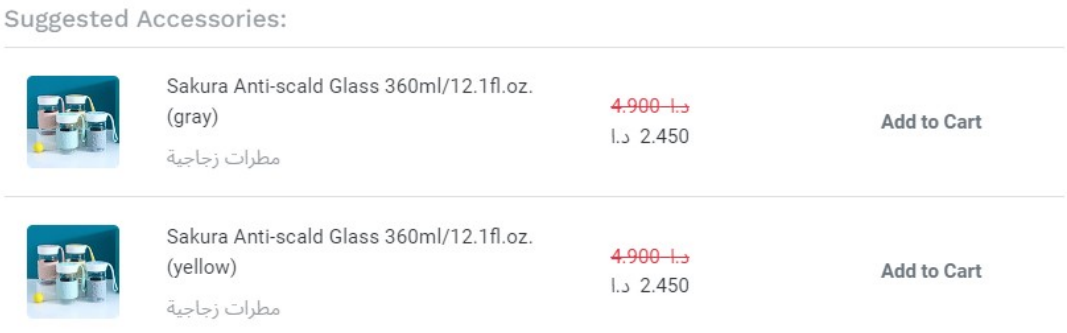
Ticket # 3141

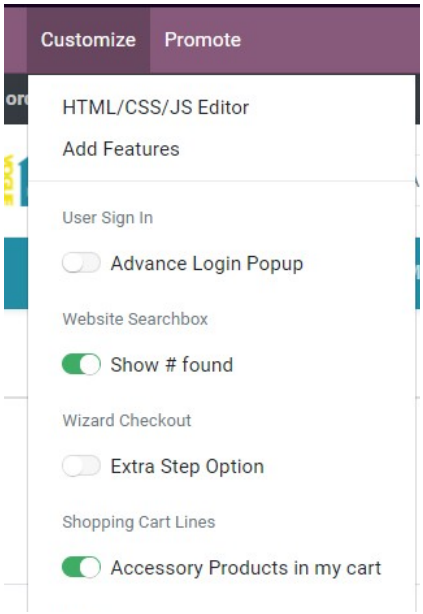
Requirements:

In the website product screen improve the alternatives products view, and add the Suggested Accessories from the cart page to the website product page same as the improved view.

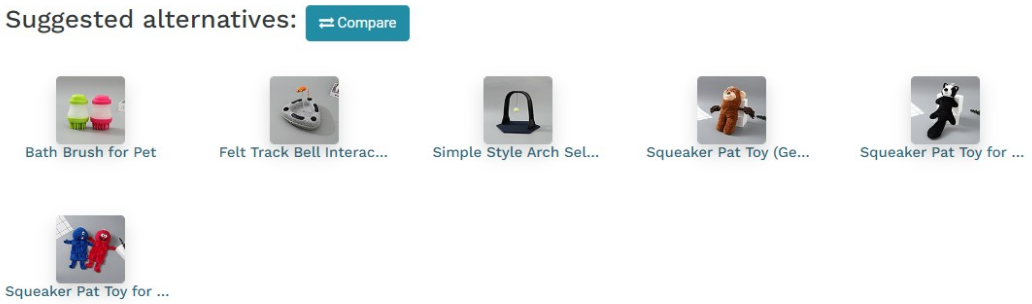
Current Standard views:

Suggested Accessories





Suggested alternatives



Design:

1. Keep standard Behavior of the suggested alternatives, and the Suggested Accessories as is.
2. Just change the following:
    a. The new view size is to be equal to the size of recently viewed products.
    b. The Suggested Accessories should be removed from the cart page.
    c. The admin can hide and show the Suggested Accessories using the customization menu.
    d. The location of the Suggested Accessories is under the Suggested Alternatives.
    e. The row will contain the same number of products as Recently viewed Products and if there are more products the user can use the arrow icon to see them ">"
    f. when clicking on the image open the product in addition to clicking on the product name.
    g. Note that when the user hovers on the recently viewed product a remove icon will show to remove the product from the slider. We want to show this behavior in the accessories and alternative products.
    h. Don’t change the stander behavior when adding an accessories product to the cart is removed from the list.
    i. Don’t change the behavior of the compare button in alternative products.

j. Improve the view of each product to be as the following image.

Ticket # 3128

Requirements:

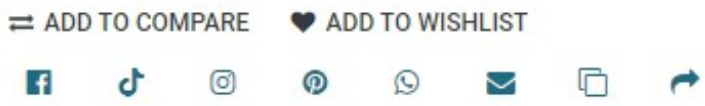
Add and remove some sites from the product share line on the product details page.

Current Standard view:

Design:

1. Replace the Twitter and LinkedIn icons and links with TikTok and Instagram icons and links.
2. Add an option to share the product in any mobile app.

Suggested View:



Ticket # 3195

Requirements:

On the website when the user scrolls down to the end of the first page products the products on the second page are open without reloading the page. We want the same behavior when the user scrolls to the top.

Current Standard view:

Design:

1. When the user scrolls to the top then the product on the previous page is removed from the current page and the number of the page is decreased by one. So if the user scrolls down and reaches the products on page 3 and then scrolls up until he reaches the last product on page two then the product on page three will removed and the counting number will show that we are on page number 2.
2. Add an option to enable this feather in the settings like scroll down.

Ticket # 3090

Requirements:

Improve the filtering system on the shop page if the user is on the 5th page of the products and he applied any filter like color for example then the filter will applied to all products in the category but the system will show the products on the 5th page. We want to display product from the 1st page.

Current Standard view:

Filter problem.mp4

Design:

1. When the user applies any filter always start displaying the result from the first page.

Suggested View:

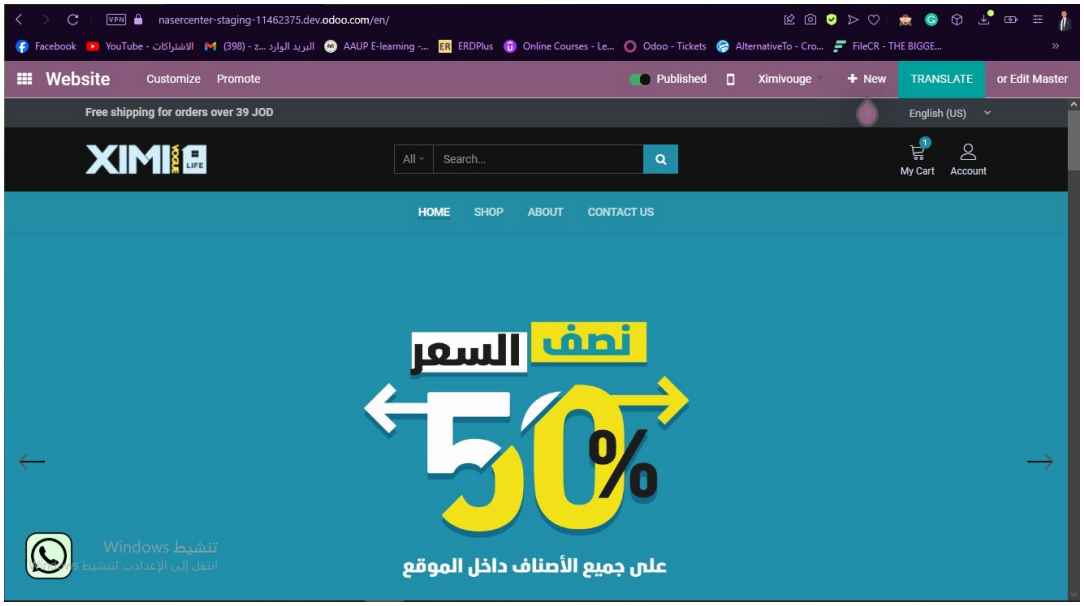
Filter problem solution.mp4

Ticket # 3204

Requirements:

Modify the behavior when the user opens the website the language of the website varies based on the browser language.

Current Standard view:



Design:

1. Always when a user opens the website display the website with Arabic language.
